SHOW NOTES - From the 3-minute video at OverflowToday.com titled:

DNA – Evidence for a Creator

Based on the book THE CASE FOR A CREATOR, by Lee Strobel, published by Zondervan.

DNA is found within every human cell.

DNA contains precise assembly instructions for every protein in the body. The information is written in a four-letter alphabet.

Strobel claims that information cannot happen randomly. That whenever we see information, we know there is an intelligent being behind it.

Strobel uses an analogy of different patterns on a beach and conclusions you would logically draw from them. Ripples in the sand can be caused by waves. But random forces cannot cause even the simplest drawing on a beach of a heart and the words “John loves Mary”. Placing such a message inside a “sealed” human cell is even more impossible.

Strobel challenges viewers to follow evidence where it points.

Strobel recommended a book titled SIGNATURE IN THE CELL: DNA AND THE EVIDENCE FOR INTELLIGENT DESIGN by Stephen C. Meyer.
